

****Patient Information****

Name: Sarah Johnson

Patient ID: SJ67890

Age: 32

Gender: Female

Date of Report: August 12, 2025

Referring Physician: Dr. Michael Lee

****Examination: Chest X-Ray (PA and Lateral Views)****

****Date Performed:**** August 11, 2025

****Radiologist:** Dr. Anna Patel******

****Findings:****

- Lungs: Clear bilaterally, no evidence of infiltrates or consolidation.
- Heart: Normal size and contour, no cardiomegaly.
- Diaphragm: Normal position, no elevation.
- Bones: No fractures or lytic lesions noted.
- Soft Tissues: No abnormalities detected.

****Impression:****

Normal chest X-ray. No acute cardiopulmonary abnormalities identified.

****Clinical Correlation:****

Patient presented with a history of cough for 2 weeks. No fever or weight loss reported. Findings suggest no structural cause for symptoms; consider viral or allergic etiology.

****Recommendations:****

- Symptomatic treatment for cough (e.g., antihistamines or cough suppressants).
- Follow-up with primary care if symptoms persist beyond 1 week.
